Mathematical Modelling of the RESIBIL Project

3D geological model – methodology (sources, method, results)

Skácelová Z., Mlčoch B.

Workshop Prague, March 4, 2019

Creating of the 3D geological model:

Depth of surface level of individual geological layers:

- Geology – individual strata (e.g. crystalline basement, Carboniferous, Permian, Cretaceous, volcanic rocks)
- Engineering geology (Cenozoic – Quaternary)
- Hydrogeology – aquifers and aquitards (e.g. Cretaceous: A - Cenomanian, B - Lower Turonian, C - Middle and Upper Turonian),

Source of data:

- Geological maps
- Boreholes database
- Geophysics (electrical and electromagnetic sounding, seismic)

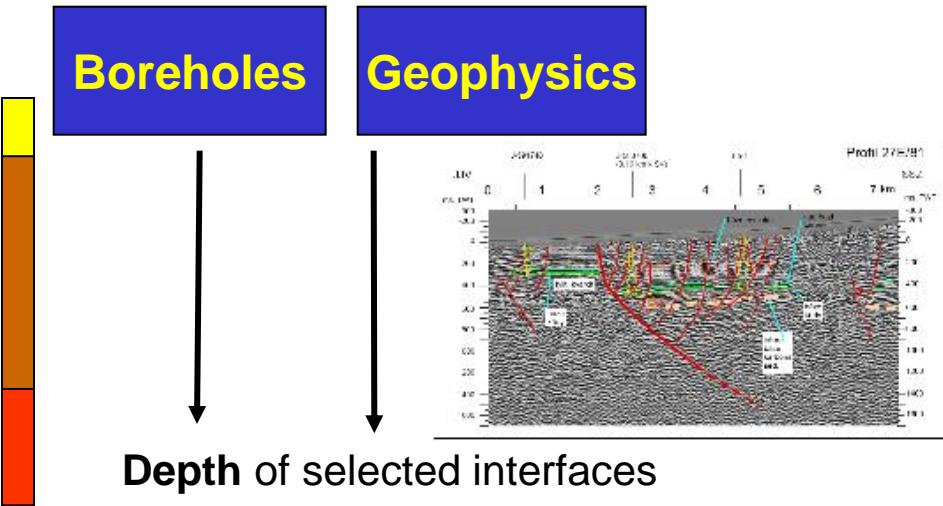

Definition of **faults** (simplified tectonic view)

Determining the **range** of layer (strata)

3D modelling in CGS:

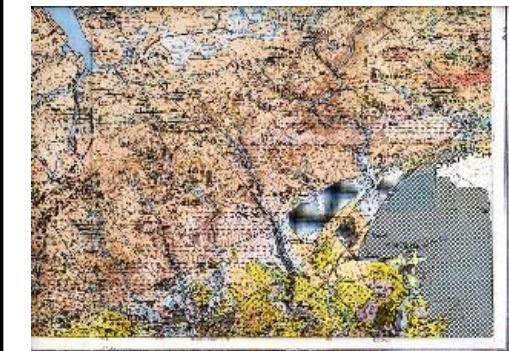

Database:

Depth of selected interfaces

Geological maps:

Map of scale 1 : 50 000
or 1 : 25 000

Conversion to altitude

+

Outcrops of individual geological
units (altitude of relief)

Input file to modelling

3D model of surface of individual geological units –
basement, aquifers

Microsoft Access Application – **input** – data from CGS borehole database (.mdb format)

The screenshot displays the GDO (Geological Data Entry) application. The main window shows a geological record for sample 47467, with various parameters like depth (LE-127), location (ZLM25), and rock type (K2C). A secondary window, 'Rozhrani' (Interface), is open, showing a detailed list of geological layers (Vrstva) from 287,10 to 482,00 meters depth. The 'Rozhrani' window includes dropdown menus for 'Oblast' (Region), 'Region', 'Jednotka' (Unit), and 'Souvrství' (Formation). It also features checkboxes for 'Vše' (All) and 'Převážně' (Predominantly) under 'Hornina' (Rock Type). The status bar at the bottom indicates the current record number (106) and total count (z 139).

Microsoft Access Application – **output** – data in Excel table .xls

3D model in Surfer software

Europäische Union. Europäischer
Fonds für regionale Entwicklung.
Evropská unie. Evropský fond pro
regionální rozvoj.

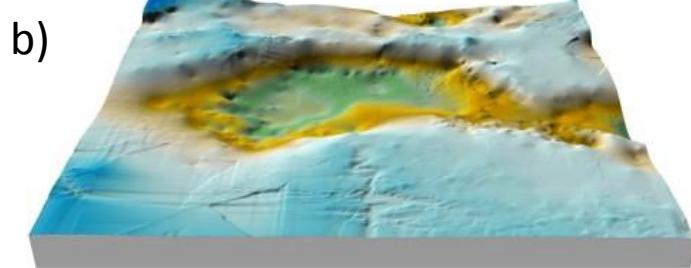

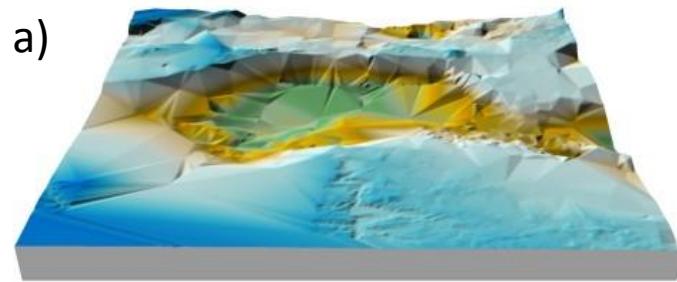

Method:

Use **Surfer** software

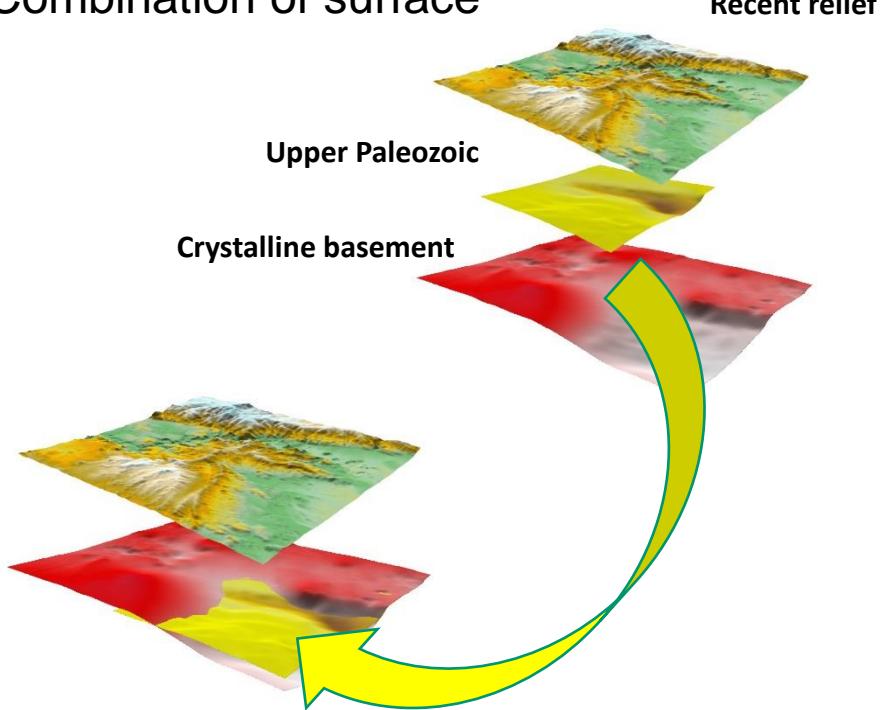

Processing all available data for each strata (boreholes, geophysisc) to input file (.dat) including outcrops on the surface - relief (from geological maps).

Gridding methods:

- a) triangulation with linear interpolation, b) kriging

Combination of surface

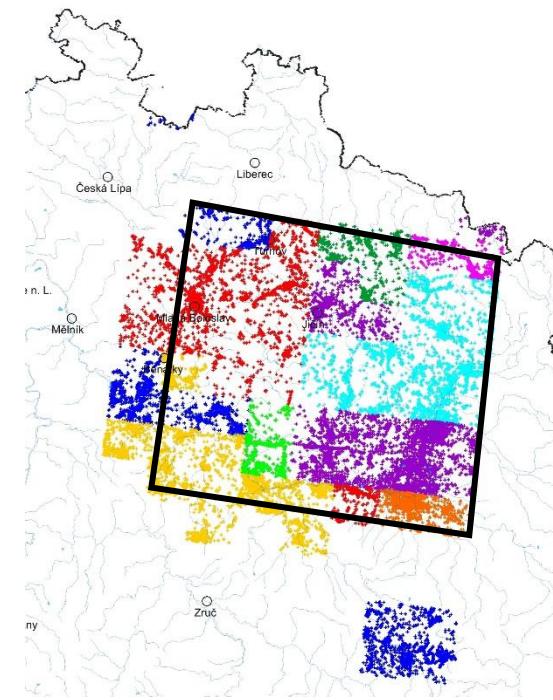

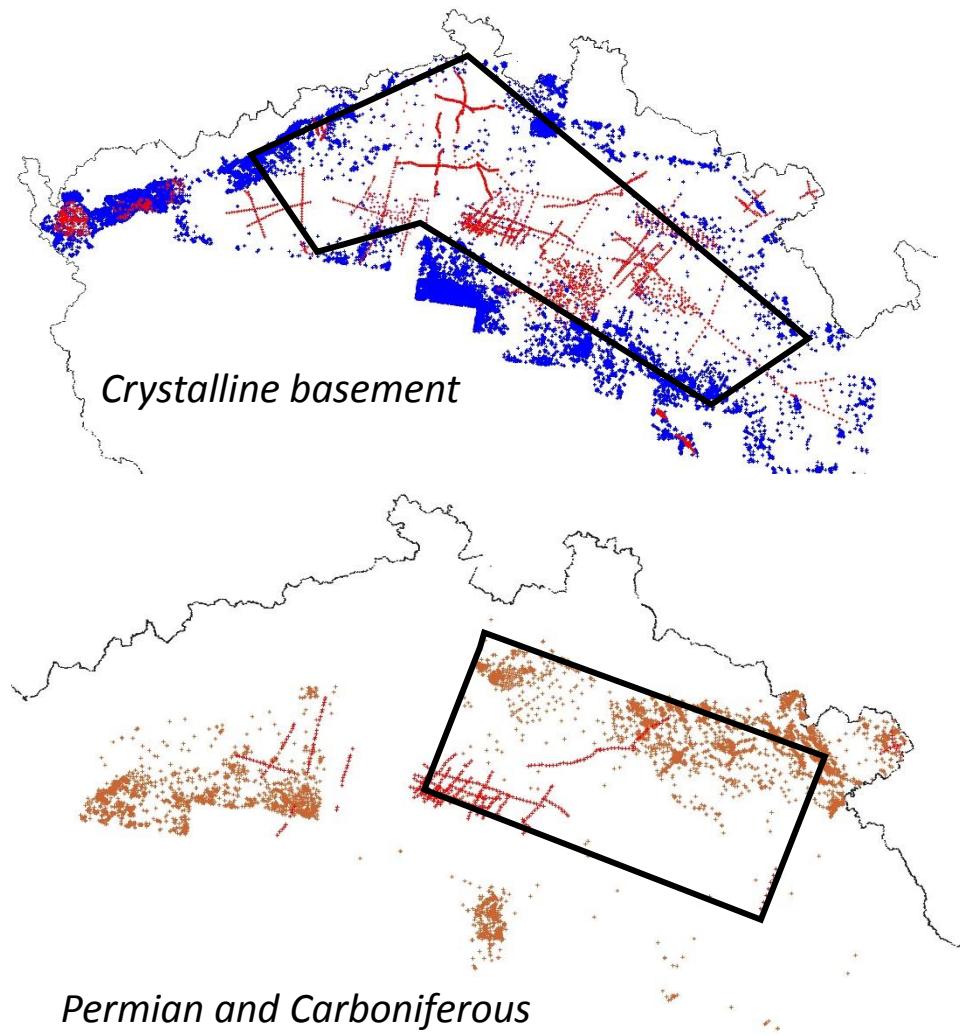

3D model in Surfer software

Europäische Union. Europäischer
Fonds für regionale Entwicklung.
Evropská unie. Evropský fond pro
regionální rozvoj.

Model accuracy – number of data and coverage of study area

Permian and Carboniferous

3D model in Surfer software

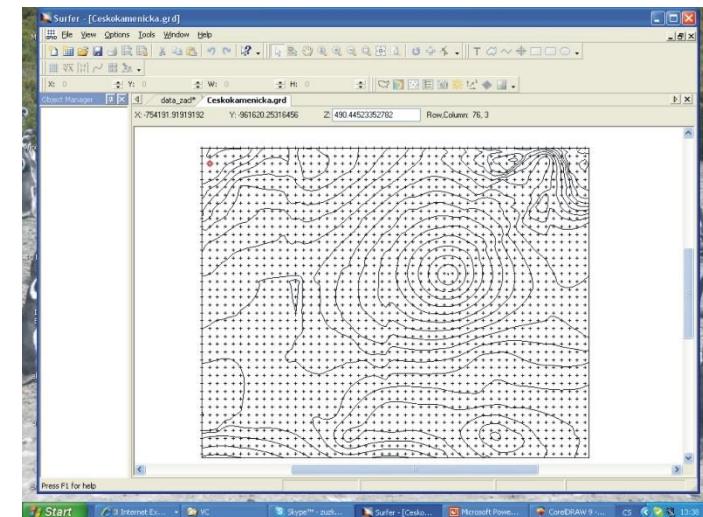

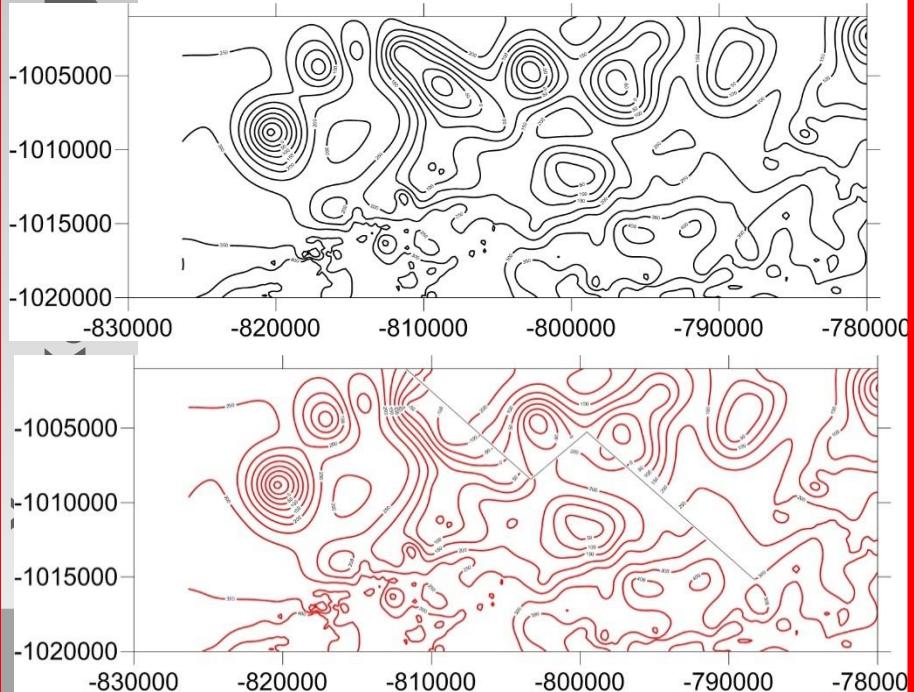

Europäische Union. Europäischer Fonds für regionale Entwicklung. Evropská unie. Evropský fond pro regionální rozvoj.

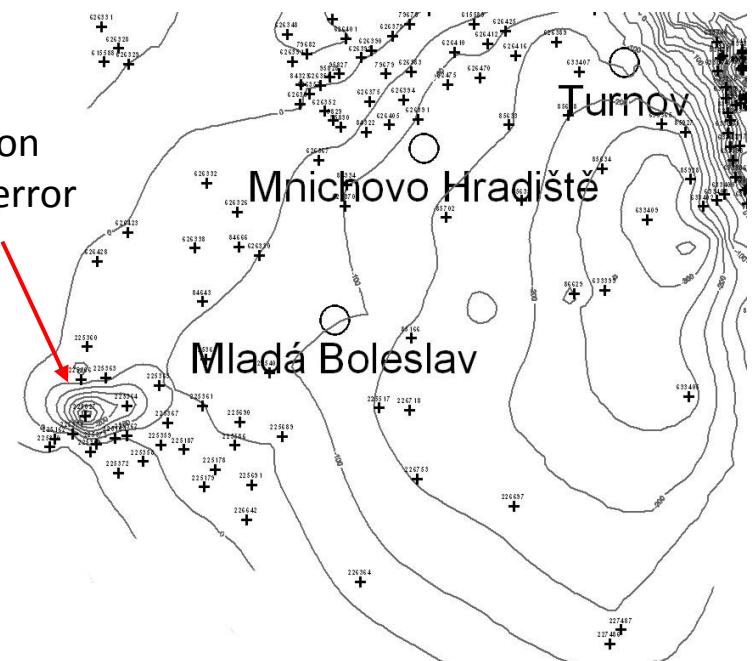

Surfer – suitable SW for checking and removing data errors, fast and user-friendly

Grid point density selection – precision of 3D model

Modelling without and with faults

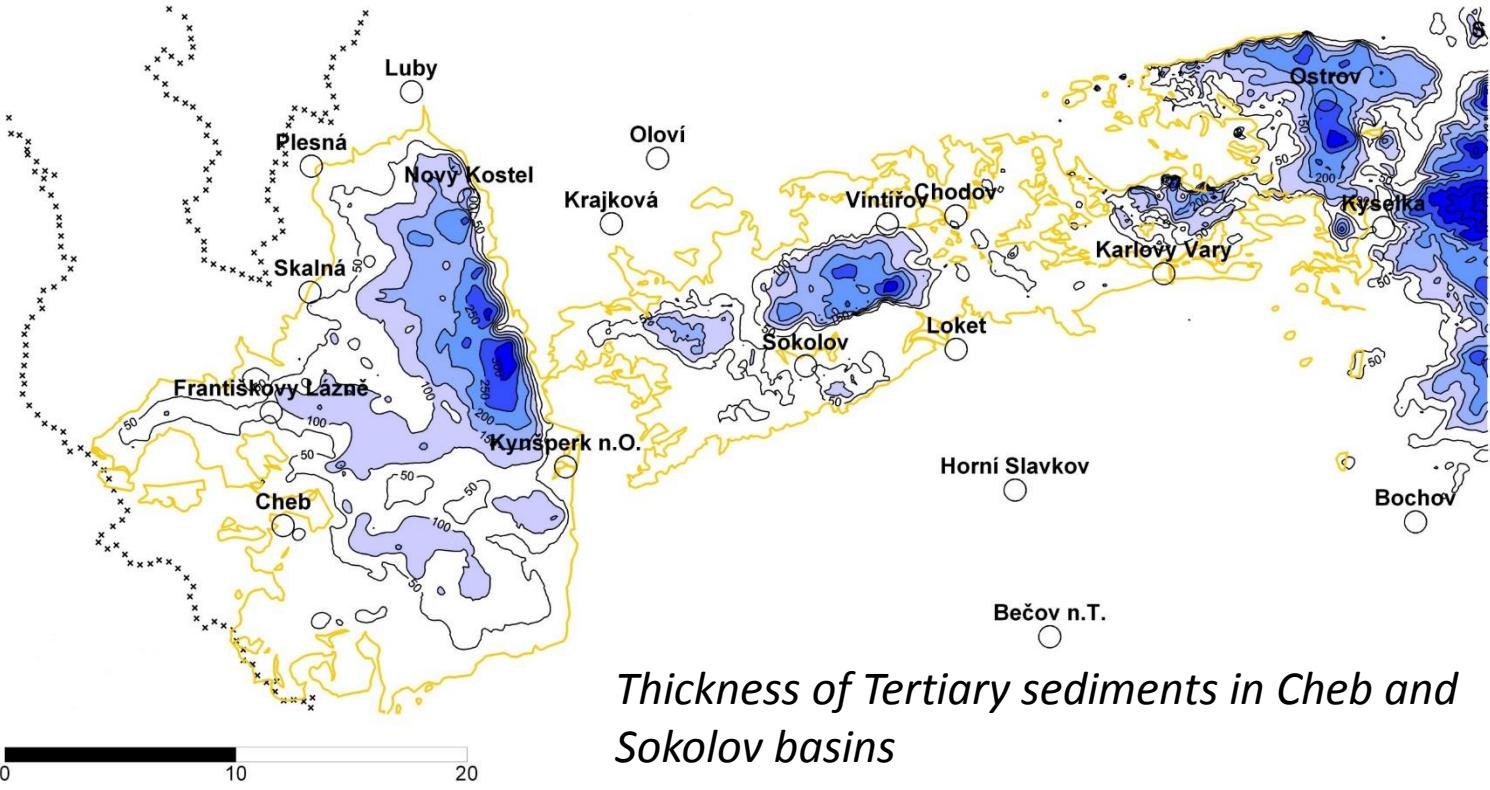

Correction
of data error

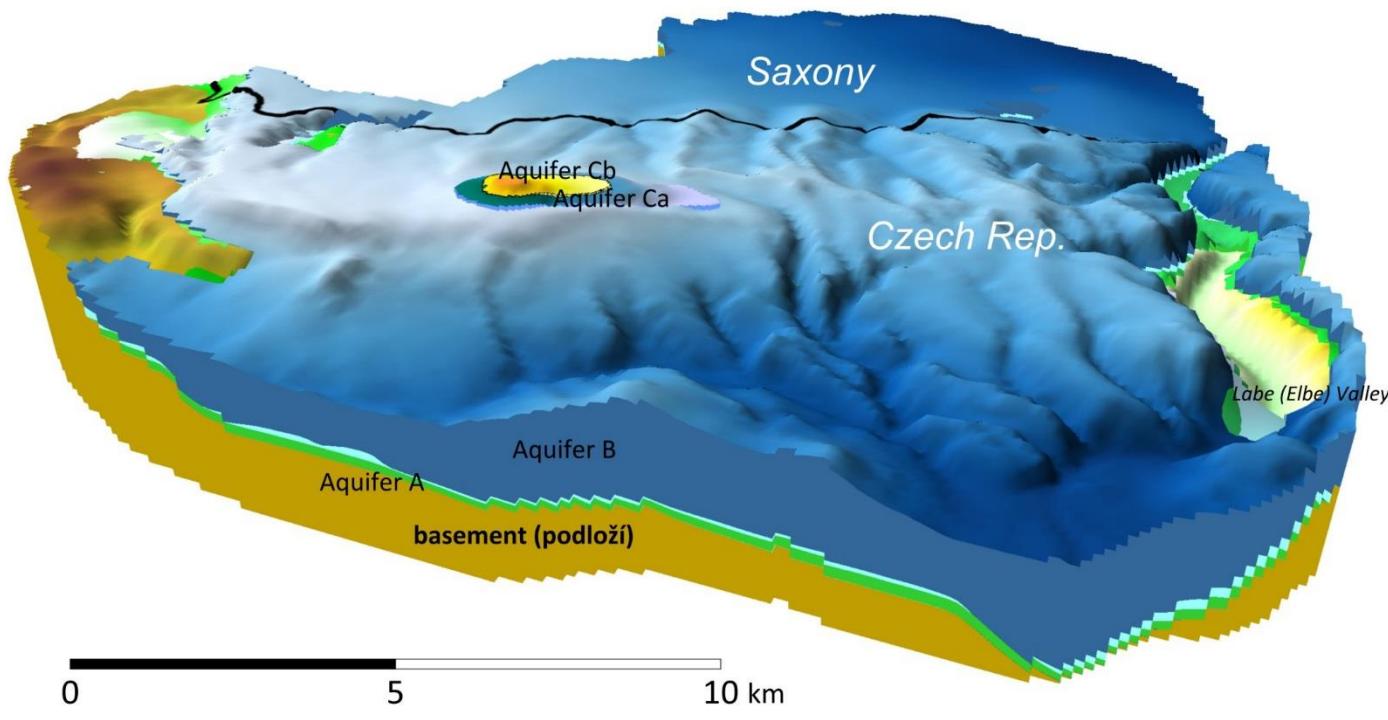

Outputs: isolines of surface strata (grid)

Options presentation: e.g. Contour line map of surface, map of thickness,
3D model, cross-section

ResiBil – 3D geological model of Děčínský Sněžník pilot area – aquifers and aquitards

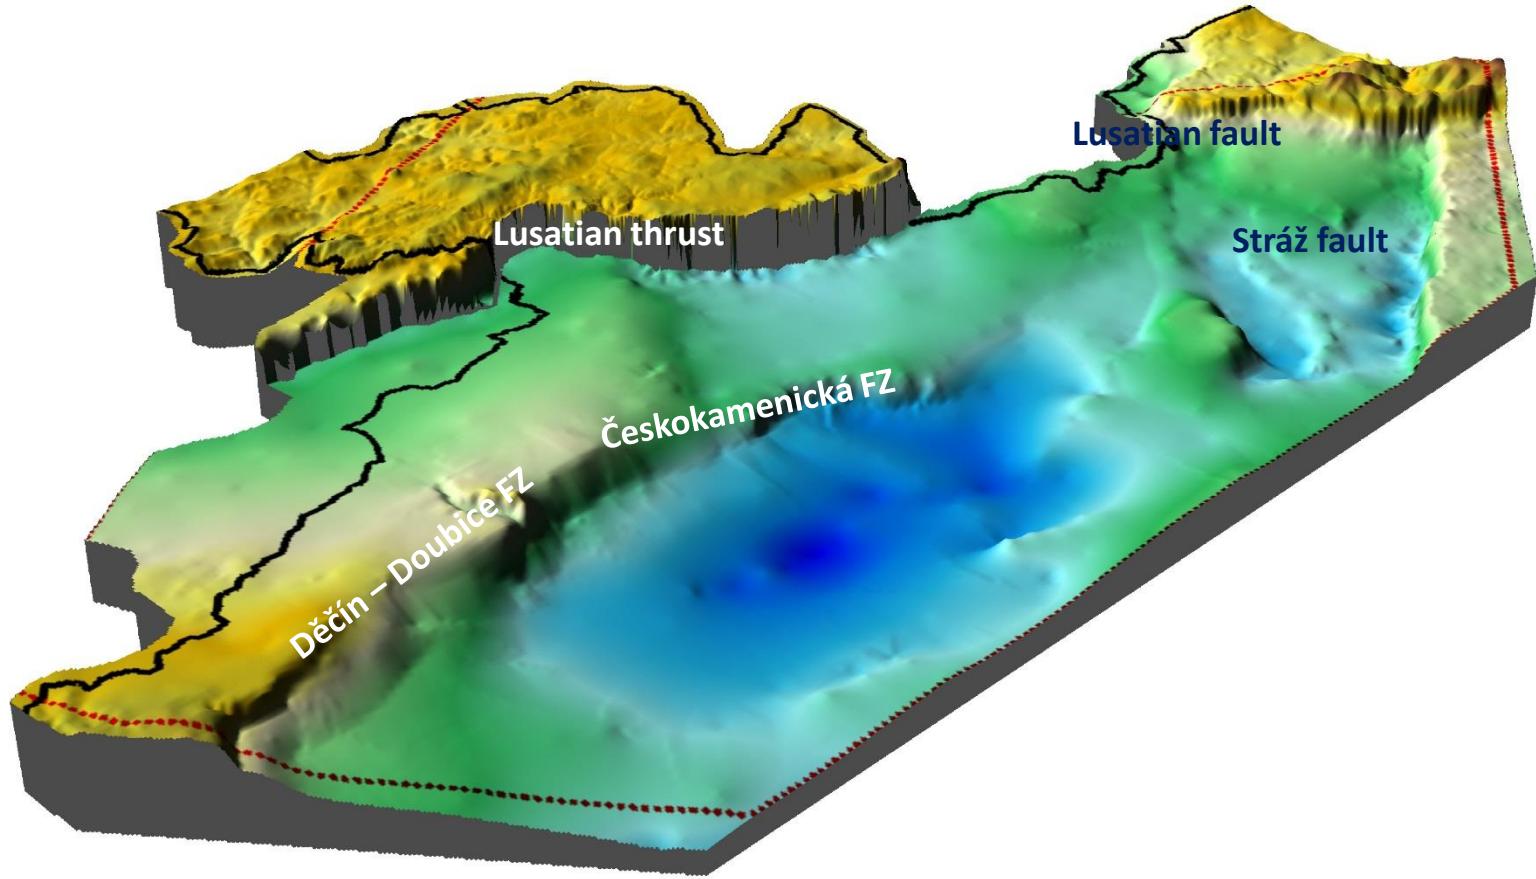

3D model in Surfer - results

Europäische Union. Europäischer
Fonds für regionale Entwicklung.
Evropská unie. Evropský fond pro
regionální rozvoj.

ResiBil study area – 3D model of basement

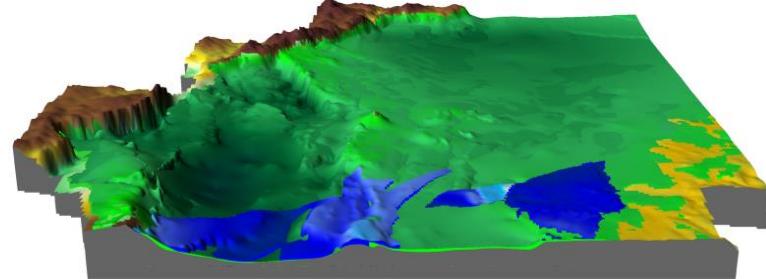

3D Model of aquifers A, B, BC – February 2019

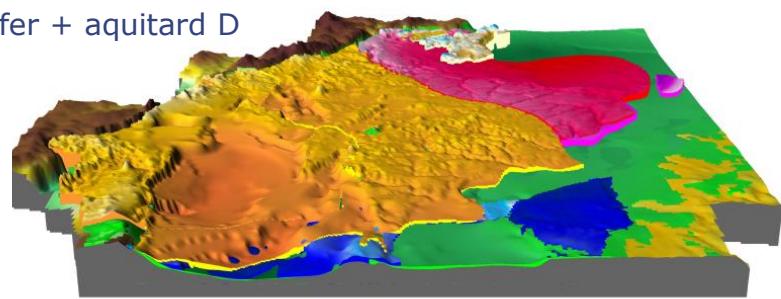

Project REBILANCE – 3D model of aquifers in area 3

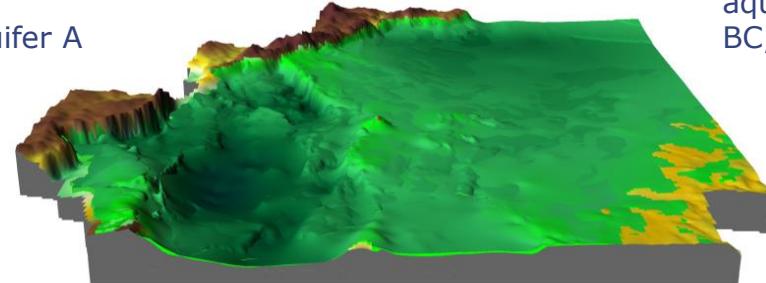

+aquifer + aquitard B

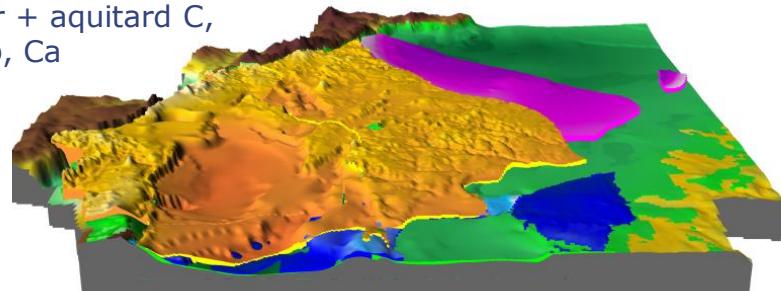

+ aquifer + aquitard D

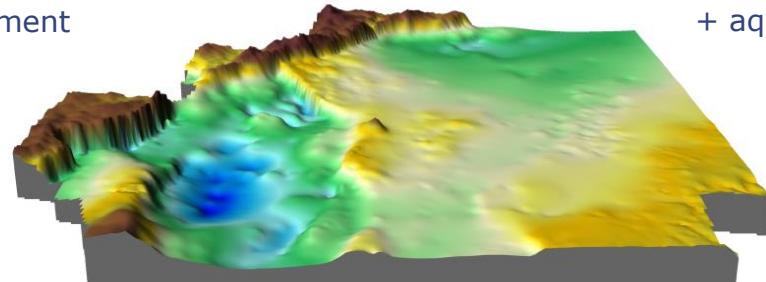

+aquifer A

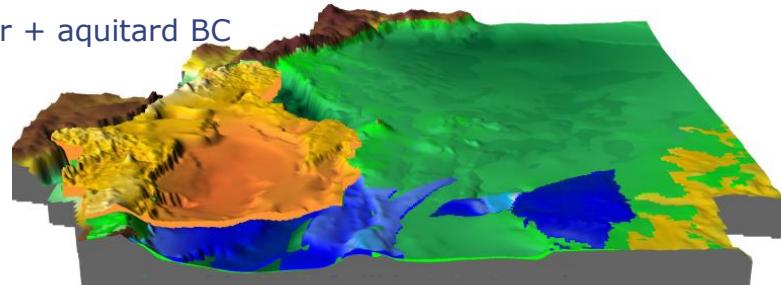

aquifer + aquitard C,
BC, Cb, Ca

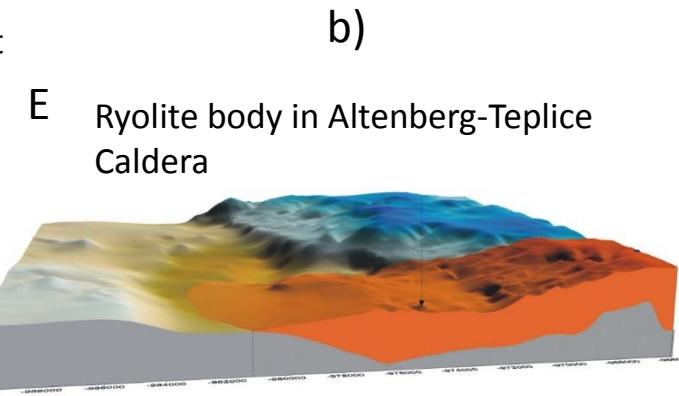

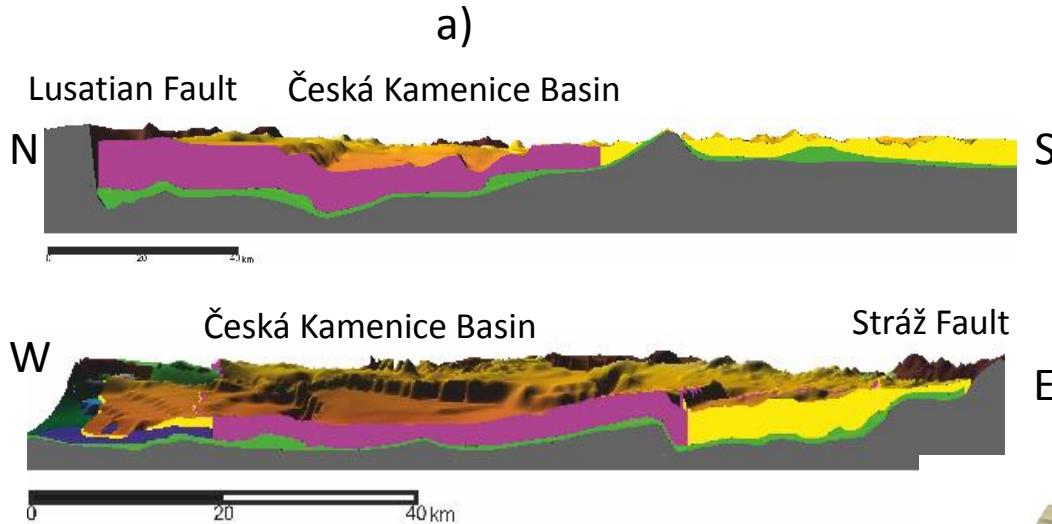

basement

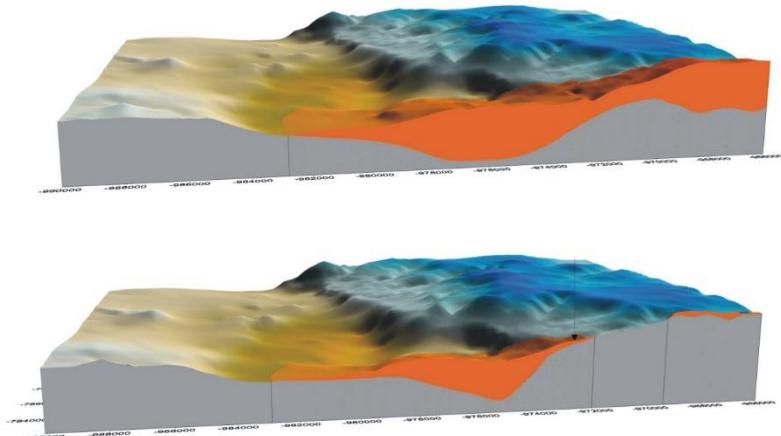

+ aquifer + aquitard BC

The 3D geological model allows to create depth cross-section:

- a) cross-section of Cretaceous Basin – aquifers A, B, BC, C
- b) cross-section of ATC rhyolite

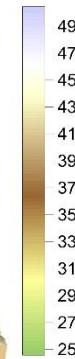

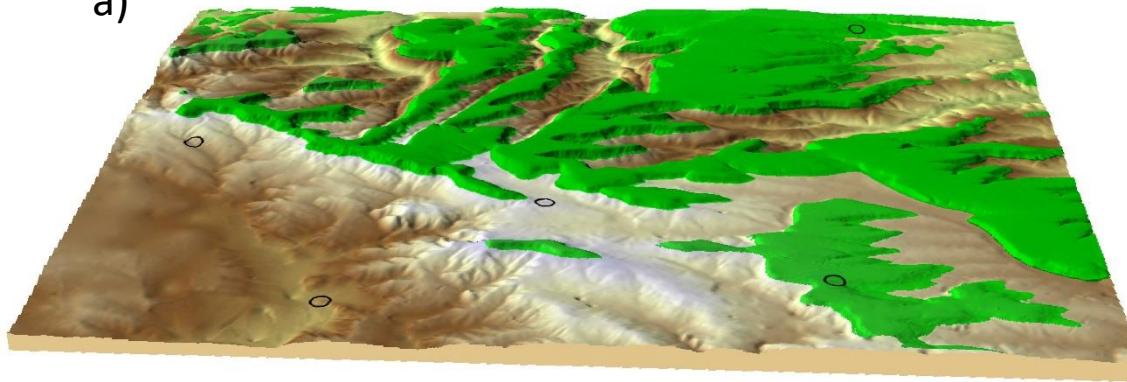

3D model in Surfer - results

Europäische Union. Europäischer Fonds für regionale Entwicklung. Evropská unie. Evropský fond pro regionální rozvoj.

a)

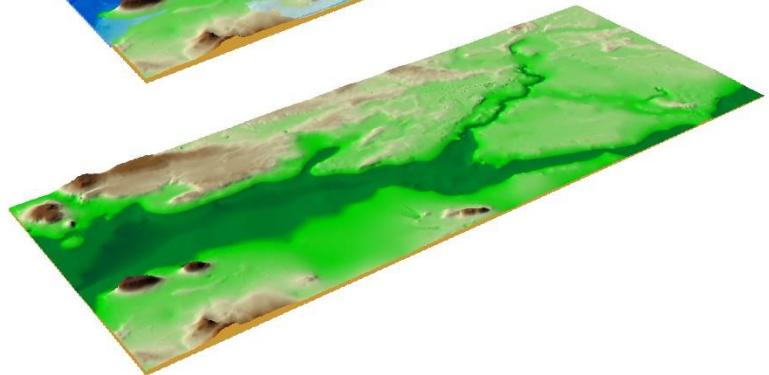

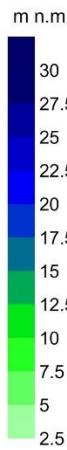

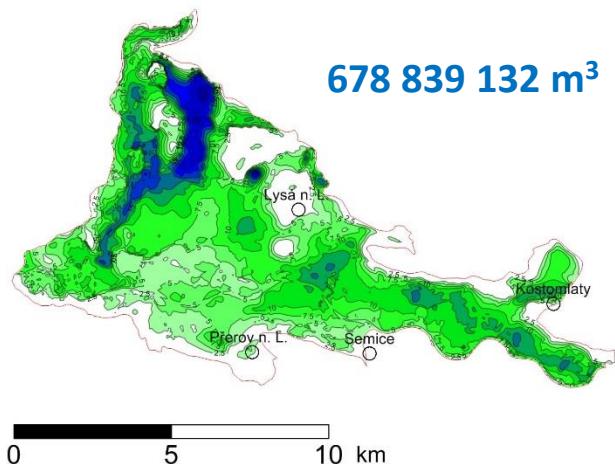

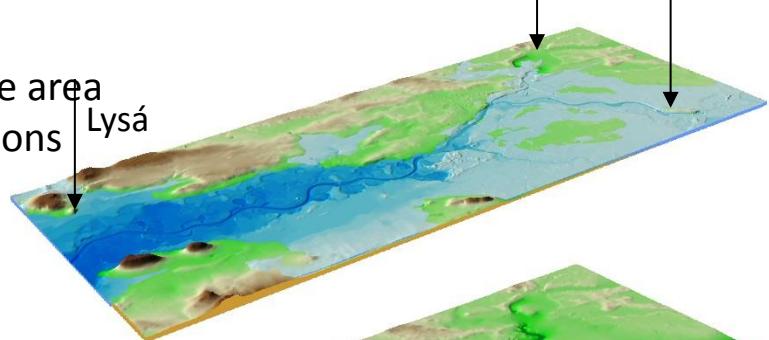

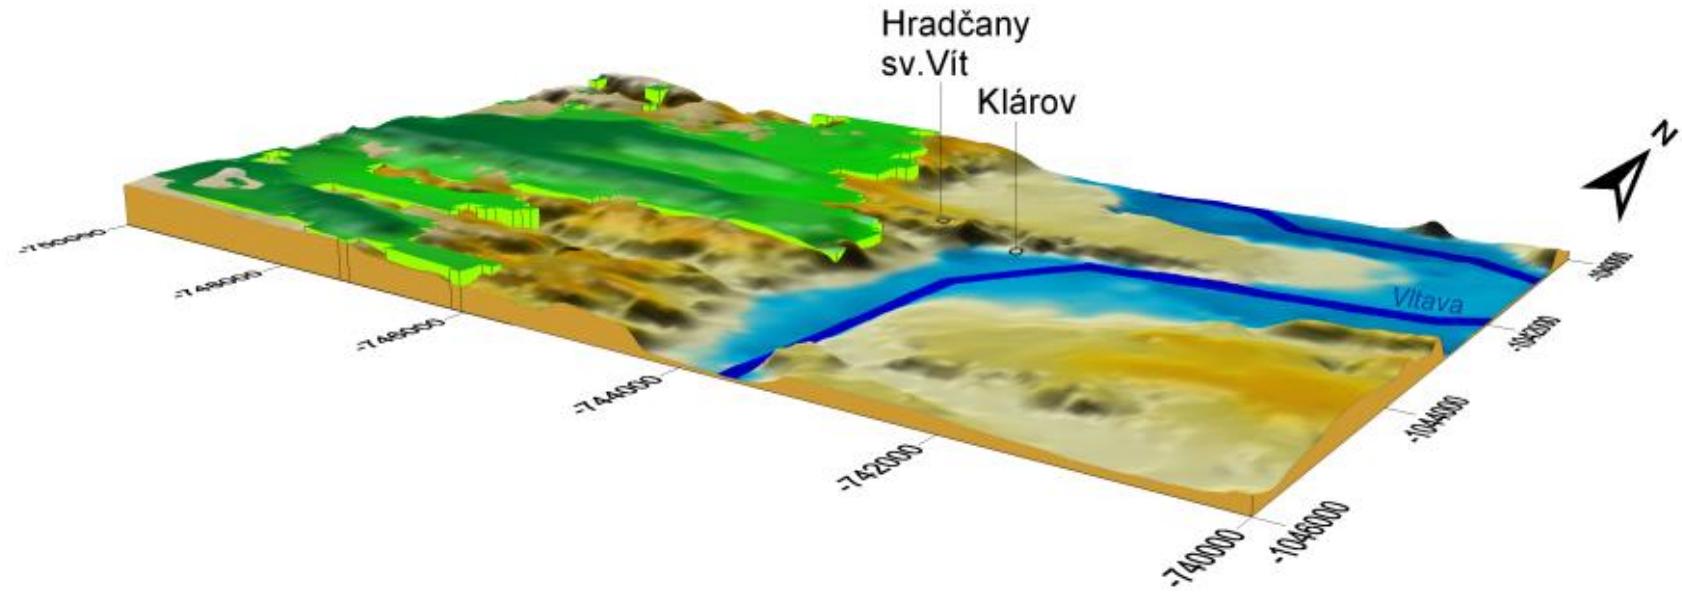

Presentation of geological model for public:

a) Model of Cretaceous sediments on Upper Paleozoic to determine of slope instability

b) Model of Quaternary sediments (aquifer) in Labe area with the volume calculation of groundwater horizons

Nymburk
Poděbrady

Thanks for your attention.
